BAER PLAST

INFINITE STRAPS SOLUTIONS

Delivering Reliable
Strapping Solutions Through
Decades of Experience

WWW.BAERPLAST.COM

Since **1974**

Rooted in the industrious spirit of the north east of Italy, Baer Plast was born in a land where craftsmanship meets innovation, and where generations have shaped materials into solutions that endure.

From its earliest days, the company has embraced a philosophy grounded in precision, resilience, and forward thinking, transforming simple raw materials into essential components for the global industry.

Our History

1974

Foundation

For over fifty years, we have been a reference point in strapping production.

From polypropylene to polyester, from standard solutions to advanced applications, we respond to every customer requirement.

1993

Research

In 1993, we began our innovation journey.

Since then, we have evolved from single-strand to multi-strand systems, offering customized PP strapping solutions tailored to customer needs.

2005

Factory expansion

In 2005, we launched production with new PP strapping equipment, marking our first expansion.

In 2008, we strengthened capacity by increasing PET strapping production and completing a second facility extension.

2026

Sustainability Focus

In 2026, we installed a 1.5 MW photovoltaic system that now fully covers our energy needs.

Alongside this transition, we boosted our PP strapping production through the implementation of a new, state of the art plant.

BAER PLAST

Raw Materials Excellency

Long-term partnerships with selected global suppliers, recognized leaders in plastic materials, ensure the **highest consistency in raw material quality**.

Rigorous internal testing and validation processes guarantee full suitability for extrusion, where every Baer Plast strap begins its production journey.

The Circular Future

We adopt the leading **Italian and European standard** for high-performance recycled plastics.
The PSV Mix Eco certification guarantees the use of polymers derived from post-consumer recycling and industrial scraps, promoting a circular production model.

plastic second life

Available upon request for the entire HI-STRAPP and HI-STRAPET range.

Strength You Can Trust

Engineered for heavy-duty applications, our high-tenacity composite strapping is the ultimate solution for securing your most challenging loads.

From high-pressure baling presses to stabilizing irregular or protruding cargo, it delivers uncompromising safety and reliability.

- Made of high-strength polyester
- No damages on packages
- Ideal for heavy and complex loads
- Alternative to metal strapping
